

OUR PHILOSOPHY: Grow Your People, Grow Your Business

We believe that people are the most valuable source of long-term competitive advantage for organizations, and an essential element to sustainable business growth.. An effective professional education program - for all levels, from management to end-users - leads to improved recruiting, increased retention and motivated employees, ultimately helping organizations win more work and increase profitability.

We believe that true professional development is a continual process, not just a singular learning event. It's a repeating cycle of education, reinforcement, and collaboration, which leads to professional growth, bringing with it the need for additional education, reinforcement and collaboration.

OUR TRAINING PROGRAM:

-  Is built on the CADD Community, an exclusive online portal delivering custom learning resources, classes and tools.
-  Is developed and taught by instructors with extensive experience both in the field and in the classroom.
-  Addresses all learning styles by blending traditional and asynchronous learning programs.
-  Guarantees low instructor-to-student ratios, allowing for the individual attention that is vital to successful learning.
-  Is an Autodesk Authorized Training Center, and ranks among the top in the country.

CADD Microsystems' training model addresses every stage of this learning and development cycle. We have more than 25 years of experience in providing the right tool for each stage, when and where our customers need it.

Our methodology also helps deliver a better ROI on technology investments, which is why you'll see professional development as an integral part of our technology solutions.

Enhance your professional education program now at www.caddmicrosystems.com/educationprogram.
